Training: Data Management in Tableau

By Corporate Renaissance Group

Introduction

Data visualization cannot be done without data. Tableau provides seamless integration with many databases for efficient data visualization. CRGroup offers an interactive one day training session for Tableau developers to leverage the flexibility of various database connectivity options provided by Tableau. The training session will enable developers to build meaningful insight with swiftness and ease.

The session may take place on premise or at a location of choice.

What you will learn

The training includes the following:

- Differences between live connections and Tableau's in-memory data engine
- Tableau data extracts – unraveling the secret
- How Tableau handles file systems vs. database systems
- Database drivers & changes to Excel file connections from version 9.0 onwards
- ETL capabilities when connecting to file-based data sources
- Cross database joins
- Combining data from disparate sources using data blending
- Connecting Tableau to multi-dimensional data sources
- Published data sources on server

Duration

1 Day

Who should attend?

The course is designed for developers who want to learn and explore the various data management capabilities of Tableau. Developers will learn techniques to help them design efficient data strategies for analytics.
